## Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

- 1. (Original) A method for treating in a human patient a non-malignant skin lesion that preferentially accumulates a photoactivatable porphyrin, comprising administering to said human patient in need thereof an effective amount of a precursor of protoporphyrin IX thereby accumulating therapeutic levels of said protoporphyrin IX, and thereafter exposing said skin lesion to light capable of photoactivating said protoporphyrin IX.
- 2. (Withdrawn) A method for detecting in a human patient a non-malignant skin lesion that preferentially accumulates a photoactivatable porphyrin, comprising administering to said human patient in need thereof an effective amount of a precursor of protoporphyrin IX thereby accumulating therapeutic levels of said protoporphyrin IX, and thereafter exposing said skin lesion to light capable of photoactivating said protoporphyrin IX.
- 3. (Original) The method of any of claims 1-2, wherein said precursor is administered topically.
- 4. (Original) The method of any of claims 1-2, wherein said precursor is 5-aminolevulinic acid.
- 5. (Currently amended) A method of treating a non-malignant skin lesion in a human patient in which protoporphyrin IX is produced from 5-aminolevulinic acid, comprising <u>administering to said</u> <u>human patient an effective amount of 5-aminolevulinic acid and</u> exposing said skin lesion in said human patient to a wavelength of light within the photoactivating spectrum of protoporphyrin IX.
- 6. (Currently amended) The method of any of claims 1-2 or 6, wherein said wavelength of light is 350-640 nm.
- 7. (Currently amended) The method of any of claims 1-2 or 6, wherein said wavelength of light is 600-700 nm.
- 8. (Currently amended) The method of any of claims 1-2 or 6, wherein said light is generated from an artificial light source.
- 9. (Currently amended) The method of any of claims 1-2 or 6, wherein said light is only within the absorption spectrum of protoporphyrin IX.

- 10. (Currently amended) The method of any of claims 1-2 or 6, wherein said photoactivating light is limited to the red and blue regions of the spectrum.
- 11. (Currently amended) A photosensitizing treatment method for treating non-malignant lesions of the skin in a human patient comprising (a)administering an agent which is not a photosensitizer but induces the synthesis of a precursor of protoporphyrin IX in vivo and then (b) exposing the lesions of the skin to a wavelength of light within the photoactivating spectrum of protoporphyrin IX.
- 12. (Original) The method of claim 11, wherein said agent induces synthesis of protoporphyrin IX in the heme biosynthetic pathway.
- 13. (Cancelled)
- 14. (Original) The method of claim 11, wherein said wavelength of light is 350-640 nm.
- 15. (Original) The method of claim 11, wherein said wavelength of light is 600-700 nm.
- 16. (Original) The method of claim 11, wherein said agent is 5-amino levulinic acid.
- 17. (Original) The method of claim 11, wherein said agent is administered topically.
- 18. (Original) The method of claim 11, wherein said agent is administered systemically.
- 19. (Original) The method of claim 11, wherein said light is generated from an artificial light source.
- 20. (Original) The method of claim 11, wherein said light is only within the absorption spectrum of protoporphyrin IX.
- 21. (Original) The method of claim 11, wherein said photoactivating light is limited to the red and blue regions of the spectrum.
